Suraksha Sathi for Hospitals

Every mother followed up. Every step under your control.

Our promise to your clinic

Every mother back for every check-up, scan and vaccine, from pregnancy through her baby's early years, without adding phone calls to your staff's day.

- **Who it's for:** paediatric, maternity and family clinics in India, especially those with no patient software.
- **The problem:** about 1 in 4 children in India are not fully immunised (NFHS-5 puts full immunisation at 76%). Every missed visit leaves a baby unprotected and loses the clinic a follow-up visit.
- **What you get:** more mothers returning on time, reception freed from reminder calls, and one list showing who needs you today.

Why clinics trust Suraksha Sathi

Fewer missed vaccines. Less repeat work for your staff. Every mother followed up, in Hindi.

From pregnancy to vaccines, one journey – Reminders for antenatal check-ups, scans and tests, then postnatal follow-up, then the baby's vaccines, all on the same mother's record. Your gynae and paediatric teams see one continuous journey instead of two separate lists.

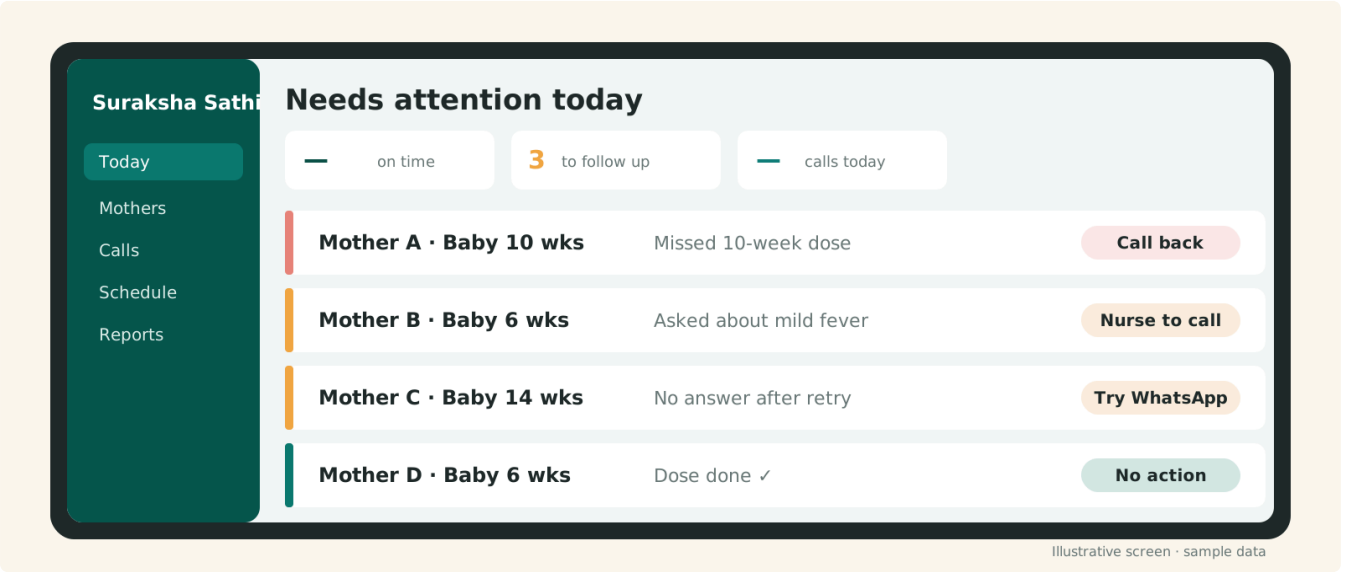

Mothers who don't miss a dose – Suraksha Sathi rings each mother in Hindi or Hinglish before her baby's vaccine is due, then follows up on WhatsApp. Every baby follows their own schedule, worked out from their date of birth, so no one slips through.

AI calls, your clinic in charge – The AI only uses the script your doctor has read and signed. It handles the common questions mothers ask again and again, and anything urgent goes straight to a named person at your clinic. Doctors can listen to any call, or start a call to a mother themselves.

Supports your staff, never replaces them – Suraksha Sathi takes on the repetitive reminder calls. Your team keeps every clinical decision and spends its time on the mothers who need a person.

Catch concerns early – When a mother raises a worry or misses a dose, it appears on your "needs attention today" list, so your team calls the right families back first.

- **Due today** – reminders going out or already answered
- **Overdue / no response** – mothers who may need another try or a staff call
- **Callback needed** – a mother has raised a concern and is waiting for your team

What your clinic gains

- **More returning visits** – Each dose a mother would have missed becomes a clinic visit, and returning visits build loyalty for the next pregnancy and the next child.
- **Hours back for reception** – With 100 mothers, a reminder call and one follow-up per dose at about 3 minutes each is around 10 hours of phone work per round. Suraksha Sathi makes those calls for you. *(Illustrative figures)*
- **Mothers who feel looked after** – A friendly call in her own language from "her" clinic builds trust and word of mouth in the community.

- **Proof you can show** – Your on-time vaccination rate, measured every month, for the clinic, sponsors or health programmes.

Why Suraksha Sathi, not SMS or manual calls

	Suraksha Sathi	SMS reminders	Staff phone calls
Speaks Hindi or Hinglish	Yes, by voice	Text only	Yes
Reaches mothers who don't read	Yes	No	Yes
Answers common questions	Yes, from doctor-approved answers	No	Yes, but takes time
Flags worries to the clinic	Automatically	No	Depends on the person
Staff time needed	Minimal	Low	Hours every week
Shows your on-time rate	Yes, every month	No	No

Simple to start – no extra burden on you

- **We set it up for you** – We load your vaccine schedule and approved scripts, and show your reception team how to use it. Adding a mother takes about 30 seconds: name, phone, baby's date of birth and consent. Or snap a photo of her existing card and confirm the details.
- **No software needed** – Built for clinics with no patient system. If you already use one, the calling service runs alongside it.
- **Works where you work** – Runs on a phone or tablet and copes with patchy internet.
- **Grows with your clinic** – Start with one pathway, such as pregnancy check-ups or infant vaccines. Later, the same platform can support chronic-care, post-procedure and discharge follow-up.

How it works

1. **Register** – Reception adds the mother at check-in and records her consent in Hindi.
2. **Schedule** – The system works out each due date from the baby's date of birth and your doctor-approved schedule.
3. **Call** – Mothers get a friendly Hindi call between 10am and 7pm, with one retry, then a WhatsApp reminder.
4. **Flag** – Missed doses and concerns appear on your dashboard for staff to act on.
5. **Report** – See your on-time vaccination rate, days late and answer rates at a glance.

Built for safety and compliance

- Built to keep patient data in India, in line with the DPDP Act 2023
- Never discusses or reveals the baby's sex (PCPNDT Act)
- No diagnosis, no medicine advice, never suggests delaying a dose
- Your doctor signs off every schedule and script before any call is made
- Consent recorded at registration; mothers can opt out at any time
- Medical and insurance details are never used in calls or messages
- Full audit log of every call

A low-risk way to start

A no-fee pilot in five steps. You decide at each step whether to go on, so you can stop at any point.

Step	What happens	You decide
1. Map and sign off	We map your current follow-up. Your doctor approves the schedule, scripts and escalation route.	Agreed scope and launch checklist

Step	What happens	You decide
2. Test calls	Your team listens to real test calls in Hindi.	Approve the call wording
3. Start small	Go live with about 10 mothers.	Safe and working?
4. Grow	Expand to the agreed group, up to 100 mothers.	Manageable for staff?
5. Review together	Compare results with your starting point.	Stop, adjust or continue

What we measure together: calls answered and opt-outs, on-time visits and vaccinations, staff time on reminder calls, concerns raised and time to callback, and feedback from mothers and staff.

Named owners on both sides: your clinical lead and front-desk contact, and our implementation lead, so you always know who to call.

Start with 10 mothers and see the difference. Book a 15-minute demo and listen to a real Hindi reminder call.
